

Olusegun Odeyemi

Derby, United Kingdom | +44 7823 676634 | segettii@gmail.com

Professional Profile

Cyber Security, digital risk, and applied systems professional with 5+ years of experience spanning cyber assurance, third-party risk, regulatory compliance, and secure technology delivery. My work combines operational cyber-security practice with independent research and product development in compliance technology, machine learning, and resilient digital systems. I built the AMTTP live MVP (amttp.com), filed a UK patent application protecting the core stability logic behind my framework, published three research outputs on Zenodo/TechRxiv, and maintain active open-source repositories documenting sustained technical execution. I am particularly focused on third-party risk management, human risk governance, secure-by-design delivery, and the practical application of computational methods to regulated technology environments.

Core Competencies

Cyber Security and Assurance

- Third-party risk management (TPRM) lifecycle management
- Supplier onboarding, due diligence, assurance review, and offboarding
- Regulatory alignment across NIS, GDPR, PCI DSS, ISO 27001, NIST, CIS, and NCSC CAF
- Secure-by-design control review for critical and regulated environments

Human Risk and Governance

- Multi-vector phishing simulations and awareness campaigns
- Human risk governance and social engineering defence training
- Risk communication for non-technical stakeholders and governance forums

Technical Security and Analysis

- Vulnerability management using Nessus and Qualys
- Penetration test scoping and web application testing against OWASP Top 10
- Cloud and defensive security across Azure, AWS, Microsoft Defender, and Sentinel
- Power BI, PowerShell, and KQL for assurance reporting and operational visibility

Innovation and Product Execution

- Live MVP delivery, open-source engineering, and research-backed product design
- Applied machine learning and compliance workflow architecture
- IP generation and translation of research into deployable product capabilities

Selected Innovation and Research Evidence

- **UK patent application (self-filed):** formal intellectual property covering the core stability logic and compliance architecture underpinning my work.
- **AMTTP live MVP:** developed and deployed amttp.com, an end-to-end proof-of-concept compliance platform demonstrating product execution and applied innovation.
- **Research outputs:** published three research papers on BSDT, collapse geometry, and unified detection methods through Zenodo/TechRxiv, with early reader engagement and download activity.
- **Open-source delivery:** active GitHub development history across product, SDK, research, and infrastructure codebases, showing sustained technical execution.

Professional Experience

Cyber Security Consultant (Assurance and Risk)

August 2023 – Present

Freelance, Derby, United Kingdom

- Led end-to-end supplier security assessments, reviewing policy artefacts and technical evidence to reduce third-party and supply-chain cyber risk.
- Designed and executed recurring phishing simulations, with role-based follow-up training to reduce human-centric exposure.
- Worked with third-party vendors to track remediation and improve control maturity in line with UK resilience and assurance expectations.
- Built Power BI dashboards to present supplier risk posture, training completion, and awareness metrics to senior stakeholders.

Information Security Analyst

October 2022 – February 2023

Jumia, Lagos, Nigeria

- Delivered security awareness sessions for Finance and Procurement teams focused on CEO fraud, invoice fraud, and phishing risk.
- Used Qualys and Nessus to identify vulnerabilities and support remediation, reducing exploitable external risk.
- Optimised Proofpoint and Microsoft Defender for Office 365 controls to mitigate supplier-originated phishing and business email compromise.
- Managed security risk for high-priority payment providers, supporting PCI DSS and data protection requirements.

Cyber Security Analyst

October 2017 – July 2021

Mctoolu Global Concept, Lagos, Nigeria

- Supported social engineering testing, including vishing and physical-tailgating scenarios.
- Executed black-box web application testing and identified OWASP Top 10 weaknesses in third-party integrations.
- Produced incident and assurance reports translating technical findings into business risk and governance language.
- Contributed to enterprise systems integration and operational optimisation work later referenced in formal employer evidence.

Technical Toolkit

- **Security Awareness:** KnowBe4, Hoxhunt, Sophos Phish Threat
- **Email Security:** Microsoft Defender for Office 365, Proofpoint, Mimecast
- **GRC and Risk:** OneTrust, ServiceNow Risk, Archer
- **Cloud and Defensive Security:** Microsoft Sentinel, Azure Security Centre, CrowdStrike Falcon
- **Data and Reporting:** Power BI, PowerShell, KQL

Education and Certifications

Bachelor of Technology, Computer Science and Engineering

Ladoke Akintola University of Technology

Certifications and Professional Development

- CompTIA Security+ (Certified)
- Sumsb AML certification / compliance training
- Certified Ethical Hacker (CEH) – Expected January 2026
- Microsoft SC-900: Security, Compliance, and Identity – In Progress
- ISO 27001 Lead Implementer / Auditor – Planned

Professional Interests

- Third-party risk management, human risk governance, and cyber resilience for critical infrastructure
- Secure-by-design approaches in regulated digital systems and utility-sector transformation
- Applied research in failure detection, compliance technology, and resilient system architecture
- Monitoring UK cyber-security and digital regulation developments, including the Cyber Security and Resilience Bill
