

Tech Nation Visa — Global Talent (Exceptional Promise)

Criteria: Evidence Index — Criteria Mapping and Verification Anchors

Applicant: Odeyemi Olusegun Israel

AMTTP Evidence Pack: What Each Document Proves

1. Criteria Map

This index is not a substitute for the evidence documents. It is a navigation layer for the assessor: each row states the criterion, the submitted evidence, the claim being proved, and the independent verification anchor. It is included to reduce ambiguity and prevent the technical exhibits from being read as isolated screenshots.

Criterion	Evidence	What it proves	Verification anchor
MC	MC-1 Live Demonstration	Original digital product publicly deployed and operated	amttp.com, Cloudflare analytics, YouTube demo
MC	MC-2 GitHub Contributions	Sustained sole-authored engineering across stack	github.com/segetii/AMTTP, commit history
MC	MC-3 Smart Contracts	On-chain enforcement architecture and deployment authorship	Sepolia Etherscan addresses, Hardhat tests
OC3	OC3-1 ML Pipeline	Significant technical contribution: ML + graph + rules risk engine	benchmark outputs, public scripts, Docker services
OC3	OC3-2 War Room + Flutter	Product contribution: institutional and consumer compliance interfaces	Next.js/Flutter screenshots, RBAC config
OC3	OC3-3 SDK + Pilot Agreement	External integration path and commercial pilot validation	signed/sealed Schedule A and signature exhibit
OC3	OC3-4 Security Auditing	Production maturity: static analysis, fuzzing, gas validation	Slither, Echidna, Hardhat reports
OC4	OC4-1 BSDT Research	Research contribution with reproducible cross-domain results	public benchmark scripts and results
OC4	OC4-2 Publications	Public research dissemination with DOI metrics	TechRxiv/Zenodo DOI pages
OC4	OC4-3 Academic Adoption	Independent academic uptake by named senior academic	CPE 604 slides + Dr Ajagbe letter

2. AMTTP Feature Coverage

AMTTP feature	Primary evidence	Coverage
Pre-settlement AML enforcement	MC-1, MC-3, OC3-1	Covered
Approve / Review / Escrow / Block decisions	MC-3, OC3-1	Covered
Hybrid ML + graph + rules scoring	OC3-1	Covered
Zero-knowledge compliance proofs	MC-3 §7	Covered
Upgradeable UUPS enforcement contracts	MC-3 §5	Covered
Cross-chain LayerZero support	OC3-3	Covered
Kleros-style dispute resolution	MC-3 §6	Covered after upgrade
Flutter consumer app + Next.js War Room	OC3-2	Covered
Six-level RBAC	OC3-2 §3	Covered
Explainable AI	OC3-2 §4, OC3-1	Covered
Sanctions, KYC, PEP, georisk, monitoring services	OC3-1 §4	Covered
SDKs for external integration	OC3-3 §2	Covered
Cloudflare/nginx-secured deployment	MC-1, OC3-4	Covered
Auditability / immutable evidence storage	OC3-2, OC3-4, MC-3	Covered

3. Risk Controls Added in the Upgraded Pack

- External validation separated from technical complexity:** OC3-3 now frames the pilot agreement as pilot-stage commercial validation, not overclaimed production adoption.
- Kleros/dispute feature no longer implicit:** MC-3 now has a dedicated dispute-resolution and evidence-escrow section.
- Academic claim bounded accurately:** OC4-2 states that DOI/preprint evidence is not being claimed as journal peer review; OC4-3 supplies the independent adoption proof.
- Verification anchors made explicit:** each document is mapped to public URLs, addresses, DOIs, signed letters, or reproducible scripts.
- Assessor navigation improved:** this index tells the reviewer exactly which document supports which criterion and which feature.
