

Tech Nation Visa — Global Talent (Exceptional Promise)

Criteria: Mandatory Criteria — Sustained Technical Leadership

Applicant: Odeyemi Olusegun Israel

MC-2: Verifiable Sole Authorship and Sustained Engineering Record

1. Claim

The AMTTP repository proves sustained, self-directed authorship across blockchain, AI, backend, frontend, SDK, security, and research tooling. This is not a single prototype; it is a full-stack engineering record spanning September 2025 to April 2026.

Claim	Evidence	Independent verification
Sustained development	361 commits over eight months	github.com/segetii/AMTTP commit history
Sole-authored breadth	Python, TypeScript, Dart, Solidity	repo tree + per-file diffs
ML work gap explained	Nov/Dec Colab artefacts	Google Drive timestamped export folders
Delivery not theory	contracts, services, frontends, SDKs	monorepo folders and deployments

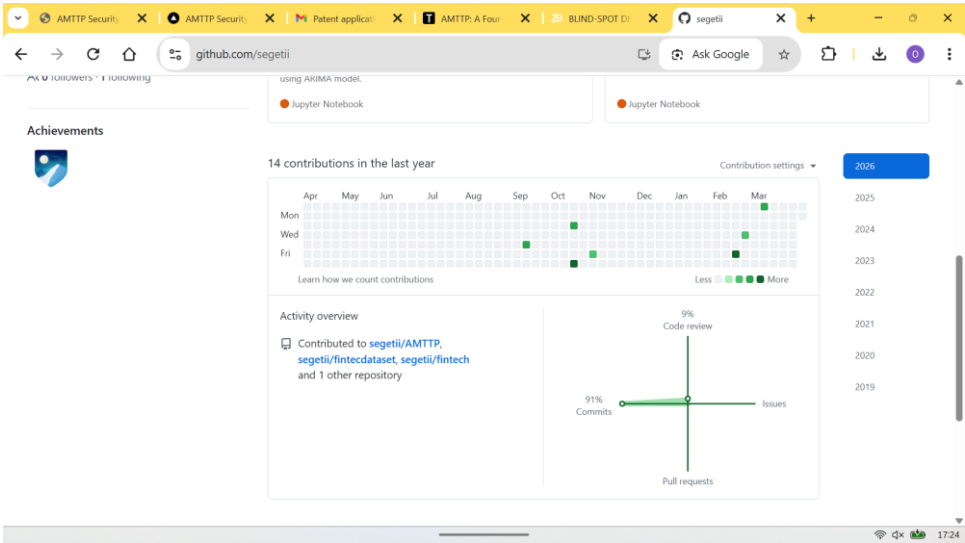

Figure 1: GitHub activity graph — sustained public development cadence.

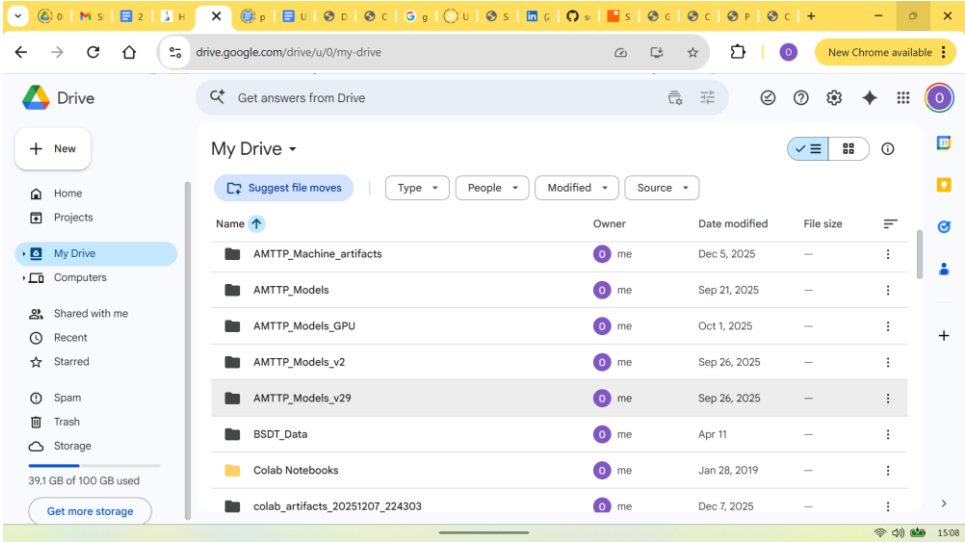

Figure 2: Google-timestamped Colab artefacts corroborating ML work outside GitHub during Nov-Dec 2025.

Domain	Deliverable	Verification
AI/ML	risk engine + benchmarks	ml/Automation/
Blockchain	38 Solidity contracts	contracts/ + Sepolia
Backend	gateway + microservices	backend/
Frontend	Next.js + Flutter	frontend/
Distribution	TS + Python SDKs	packages/

Anti-loophole note: The claim is independently inspectable: repository timestamps, file history, folder structure, and Colab timestamps provide a verification chain.
