State-Adaptive Compliance Enforcement System with
Multi-Spectrum Anomaly Detection and Failure-Mode Correction
for Decentralised Finance Networks

Applicant: Odeyemi Olusegun Israel Date: 4 March 2026

Figure 15 — Shared Adaptive Damping Function

The adaptive damping function $\gamma^*(E) = E/(E + \theta)$ operates at two levels:

- **Transaction level (BSDT):** modulates correction operator intensity based on per-transaction blind-spot energy.
- **Network level (Adaptive Friction):** drives enforcement profile selection based on aggregate systemic energy.
